

SALESFORCE PROJECT IMPLEMENTATION PHASES

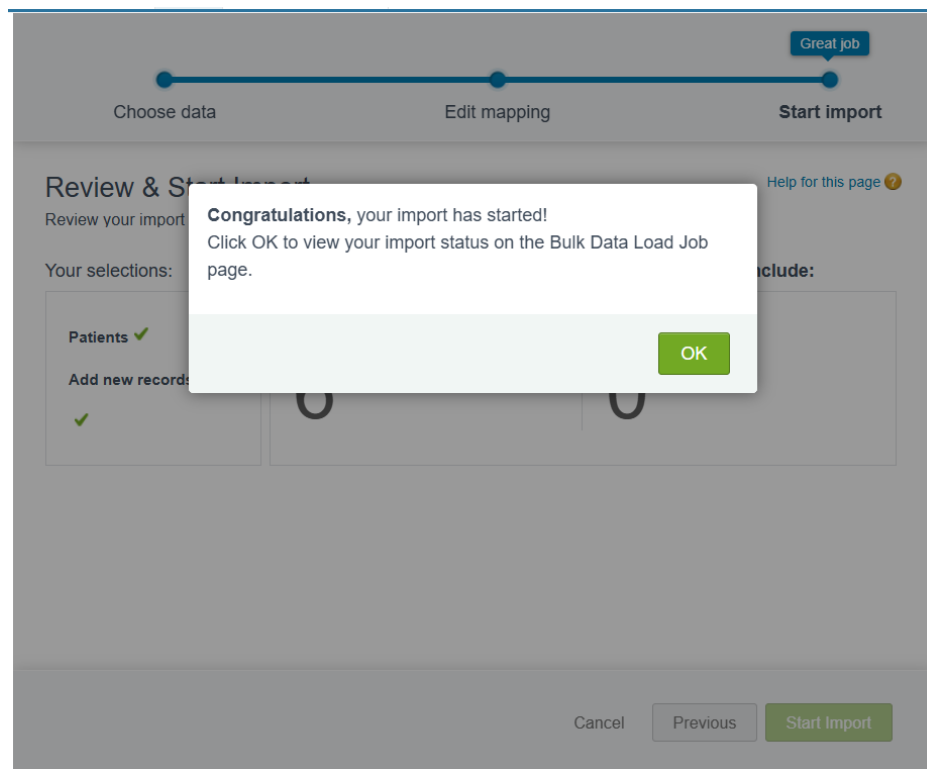

MediSmart CRM – AI-Powered Healthcare Appointment & Patient Follow-up CRM

Phase 8: Data Management & Deployment

In this phase, we focus on how data is imported, maintained, backed up, and how changes are deployed across Salesforce environments.

Data Import Wizard

- Used for importing small data volumes (up to 50,000 records).
- Supports standard objects (Accounts, Contacts, Leads, Solutions) and custom objects.
- Easy UI-based import process without coding

Data Export & Backup

- Weekly or monthly data exports in .CSV format.
- Used for backup and data archival purposes.
- Ensures disaster recovery and data security compliance.

SETUP

Data Export

Monthly Export Service

Data Export lets you prepare a copy of all your data in salesforce.com. From this page you can start the export process or run automatically. When an export is ready for download you will receive an email containing a link that allows you to download export files are also available on this page for 48 hours, after which time they are deleted.

Next scheduled export:

A data export is currently in progress for your organization.

Export Now

Schedule Export

Your export has been queued. You will receive an email notification when it is completed.

Scheduled By Vivek Deshmukh

Schedule Date 9/27/2025

Export File Encoding ISO-8859-1 (General US & Western European, ISO-LATIN-1)

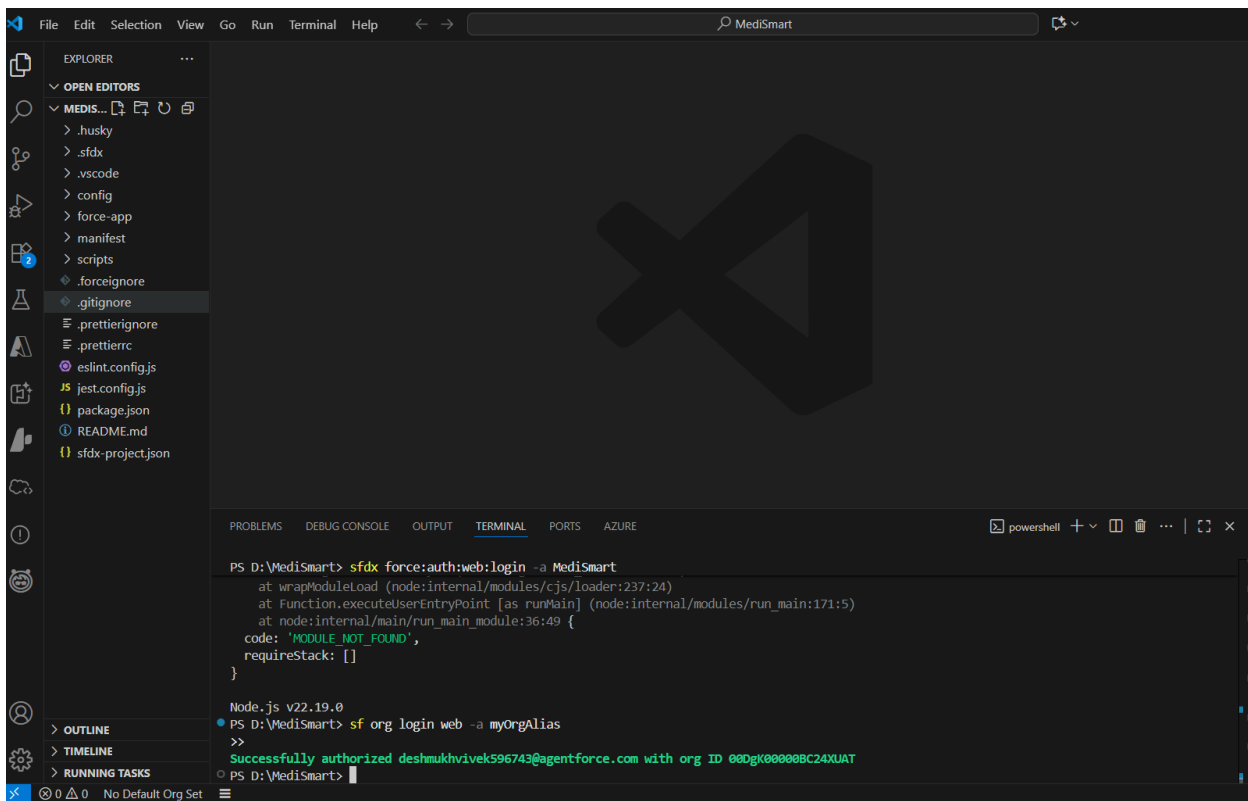

VS Code & SFDX

Visual Studio Code (VS Code) is the modern IDE used for Salesforce development.

SFDX (Salesforce DX) is the command-line interface (CLI) that enables source-driven development, continuous integration, and automated deployments.

Command for Authentication:

`sf force:auth:web:login -a myOrgAlias`

The screenshot shows the Visual Studio Code (VS Code) interface. The Explorer panel on the left displays the file structure of a project named 'MediSmart', including files like .husky, .sfdx, .vscode, config, force-app, manifest, scripts, .forceignore, .gitignore, .prettiignore, .prettierrc, eslint.config.js, jest.config.js, package.json, README.md, and sfdx-project.json. The main editor area shows a large, faint VS Code logo. The Terminal panel at the bottom is active, displaying the following commands and output:

```
PS D:\MediSmart> sfdx force:auth:web:login -a MediSmart
at wrapModuleLoad (node:internal/modules/cjs/loader:237:24)
at Function.executeUserEntryPoint [as runMain] (node:internal/modules/run_main:171:5)
at node:internal/main/run_main_module:36:49 {
  code: 'MODULE_NOT_FOUND',
  requireStack: []
}

Node.js v22.19.0
PS D:\MediSmart> sf org login web -a myOrgAlias
>>
Successfully authorized deshmukhvivek596743@agentforce.com with org ID 00DgK0000008C24XUAT
PS D:\MediSmart>
```

Metadata can be deployed using vs code just right click on main file and then click and Deploy This Source to Org
