

SALESFORCE PROJECT IMPLEMENTATION PHASES

MediSmart CRM – AI-Powered Healthcare Appointment & Patient Follow-up CRM

Phase 4: Process Automation (Admin)

Validation Rules:

1. Salesforce validation rule named Appointment_Date_Future. The rule is designed to ensure data integrity by preventing users from creating or editing an appointment with a date and time that has already passed. If a user attempts to save a record with a past date, they will receive an error message stating, “Appointment date must be in the future”.

The screenshot displays the Salesforce Object Manager interface for the 'Appointment Validation Rule'. The header shows the 'SETUP' icon and 'Object Manager'. The main title is 'Appointment Validation Rule' with a 'Back to Appointment' link. Below this is the 'Validation Rule Detail' section, which includes 'Edit' and 'Clone' buttons. The details are as follows:

Validation Rule Detail			
Rule Name	Appointment_Date_Future	Active	☒
Error Condition Formula	Appointment_DateTime__c < NOW()		
Error Message	Appointment date must be in the future.	Error Location	Appointment DateTime
Description			
Created By	Vivek Deshmukh, 9/23/2025, 11:34 AM	Modified By	Vivek Deshmukh, 9/23/2025, 11:34 AM

At the bottom of the details section, there are 'Edit' and 'Clone' buttons.

2. validation rule on the 'Patient' object designed to ensure phone numbers are exactly 10 digits long.

Reminder: Your follow-up on (Ifollow_Up__c.Follow_Up_Date__c)

HTML Preview

Hello (Ifollow_Up__c.Appointment__r.Patient__r.Name),

This is a friendly reminder of your follow-up appointment scheduled on {!TEXT(Ifollow_Up__c.Follow_Up_Date__c)}.

Doctor: (Ifollow_Up__c.Appointment__r.Doctor__r.Name)

Appointment Reference: (Ifollow_Up__c.Appointment__c)

Please reply to this email or call us if you need to reschedule.

Thank you,

Your Clinic Team

- Classic Email Template named Appointment_Reminder_Template. It is designed to send a reminder to patients one day before their scheduled visit. The template uses several merge fields to automatically populate personalized information, such as the patient's name, the exact appointment date and time, and any relevant notes, ensuring each email is accurate and specific to the recipient.

2. Workflow Rule

Workflow Rule named FollowUp_Reminder_Rule. This rule is configured with a time-dependent workflow action that is set to trigger one day before the date specified in the "Follow Up Date" field.

The screenshot shows the 'Edit Rule FollowUp_Reminder_Rule' page in Salesforce. The page is titled 'Step 3: Specify Workflow Actions' and 'Step 3 of 3'. It includes a 'Done' button and a link to 'See an example'. The rule criteria are defined as 'Follow_Up_Date__c >= TODAY()' with evaluation criteria 'Evaluate the rule when a record is created, and any time it's edited to subsequently meet criteria'. Under 'Immediate Workflow Actions', there is a table with one action: 'Populate Patient Email' of type 'Field Update'. Below this is an 'Add Actions' button. The 'Time-Dependent Workflow Actions' section is also visible with a link to 'See an example'.

Action	Type	Description
Edit Remove	Field Update	Populate Patient Email

3. Process Builder (*Also legacy → replaced by Flow*)

- **Objective:** Automate multi-step processes.
- **What we did:**
 - Tried Process Builder for Appointment reminder, but switched to **Record-Triggered Flow** (best practice).

Flow Builder

Record-Triggered Flow:

Record-Triggered Flow in Salesforce designed to automate clinic processes based on an appointment's status. The flow uses a Decision element to check the status field: if an appointment is marked as "Scheduled," it automatically creates a task to prepare the room. If the appointment status is updated to "Completed," the flow creates a new follow-up record, ensuring no patient is missed.

Screen Flow: Patient Registration UI

Purpose

This flow allows users (patients or staff) to register a new Patient in Salesforce through a guided UI form. It captures key patient details such as personal information, contact details, medical history, and optionally creates an appointment immediately.

Record-Triggered Flow: Appointment Reminder (1-Day-Before Email)

Purpose

This automation sends a reminder email to the patient 1 day before the scheduled appointment. It ensures patients are reminded on time, reducing missed appointments.

Flow Details

- Flow Type: Record-Triggered Flow
- Flow Name: Appointment_Reminder_Flow
- Object: Appointment__c
- Trigger: When a record is created or updated
- Entry Criteria:
 - Appointment_Date__c Is Not Null
 - Appointment_Status__c = *Scheduled* (or equivalent active status)

Tasks

Automation: Prepare Consultation Room Task

- Objective: Ensure the doctor's room is ready before each scheduled appointment.
- Implementation: Created a Record-Triggered Flow on Appointment__c when status = "Scheduled".
- Action: Auto-generated a Task named "*Prepare Consultation Room*" assigned to the Doctor.
- Outcome: Doctors receive tasks automatically, improving operational efficiency.
