

# SALESFORCE PROJECT IMPLEMENTATION PHASES

## MediSmart CRM – AI-Powered Healthcare Appointment & Patient Follow-up CR

### Phase 6: User Interface Development

**Lightning App Builder:** To deliver a seamless and role-specific experience, we developed four custom Lightning pages powered by Lightning Web Components (LWC). Two pages are record-focused—one optimized for doctors and another for receptionists to manage patient information—while the remaining two are custom Home Pages that surface real-time, role-based insights, appointment metrics, and actionable components at a glance. This approach ensures faster navigation, improved usability, and a unified experience across all clinic staff.

 **Lightning App Builder**

The Lightning App Builder provides an easy-to-use graphical interface for creating custom Lightning pages for Salesforce Lightning Experience and mobile app. Lightning pages are built using Lightning components—compact, configurable, and reusable elements that you can drag and drop in regions of the page in the Lightning App Builder.

Fig: List of Pages

## Home Page:

Home page contains Project name and Clinic Chatbot for registering patient and appointment easily

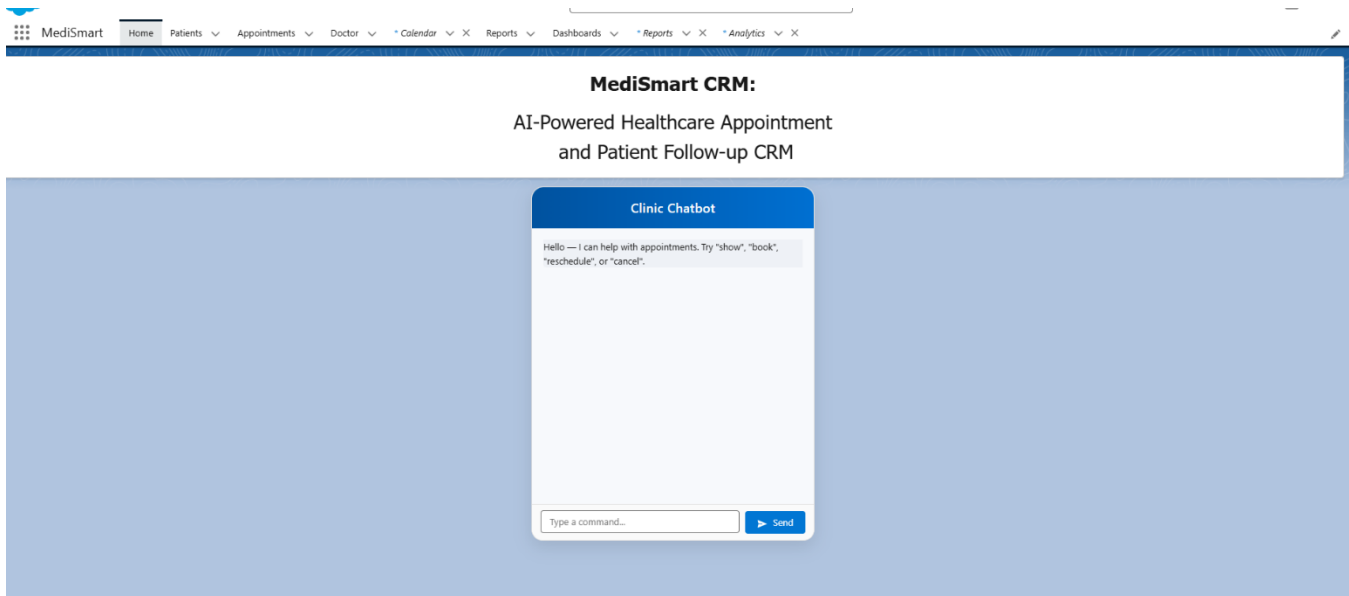

Fig: Home Page

## Patient\_Record\_page:

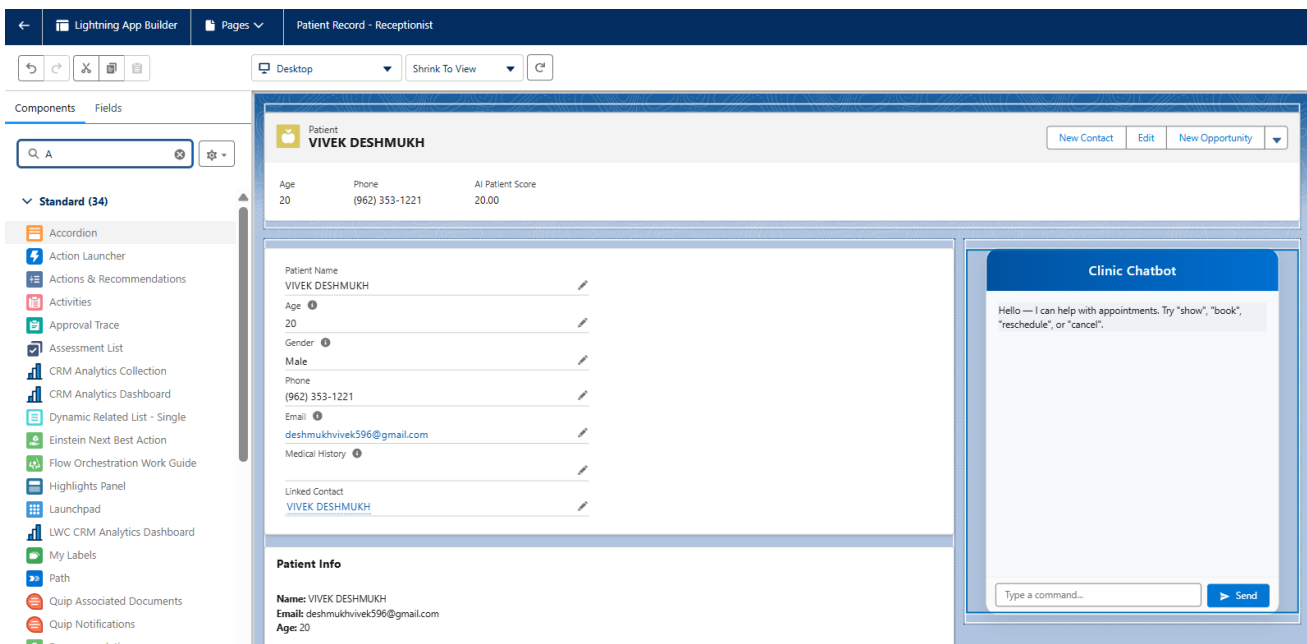

Fig : Patient\_Record\_page

Doctor\_Record\_page: It build using various component like Details, RecentItems, Activities

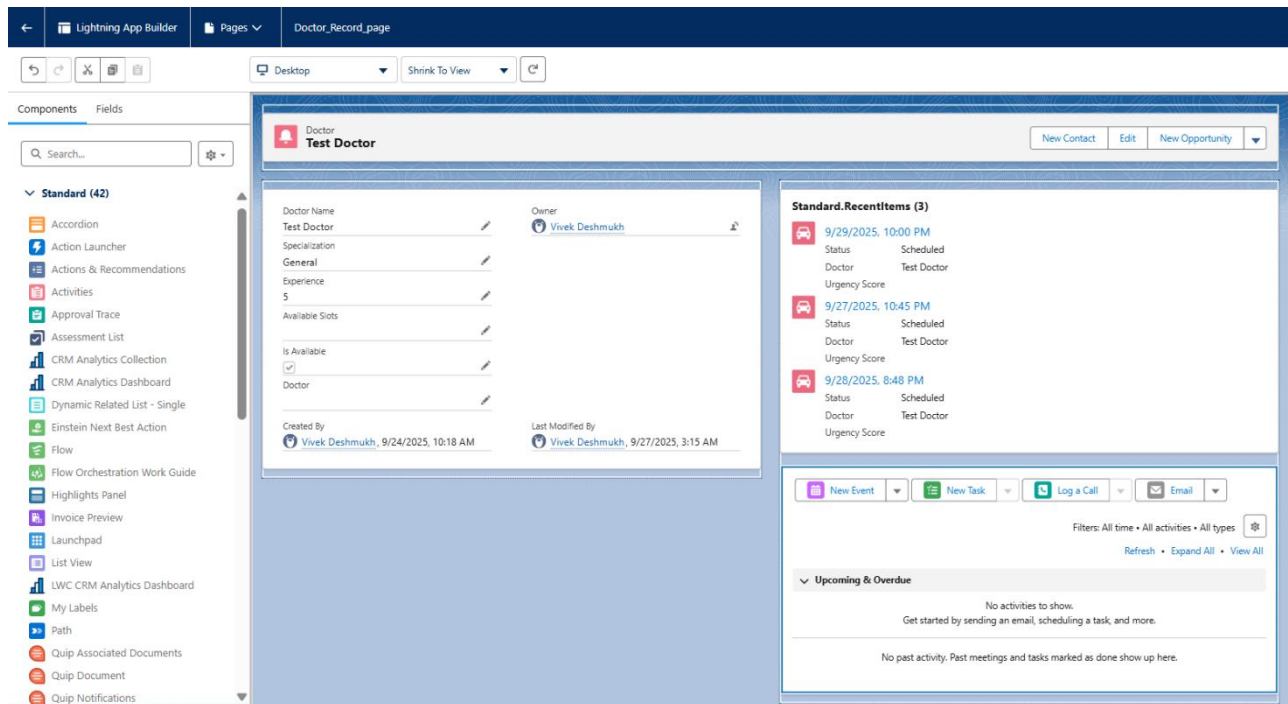

Fig: Doctor\_Record\_Pages

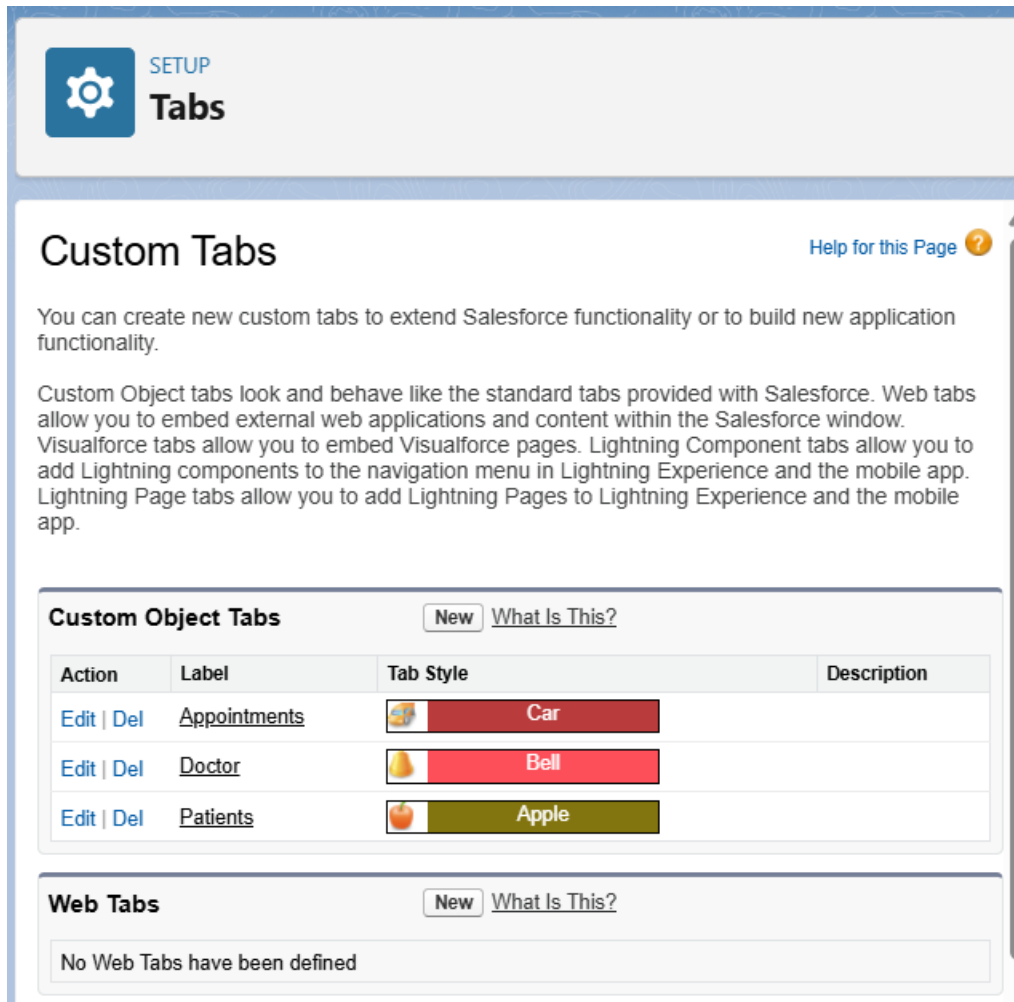

Receptionist can enter a new Patient page: As a name it made so receptionist can enter patient

The screenshot shows a Salesforce Flow titled 'Receptionist can enter a new Patient'. The form contains the following fields and sections:

- \* Full Name**: A text input field.
- \* Patient Email**: A text input field with the value 'you@example.com'.
- Phone**: A text input field.
- \* Age**: A text input field.
- \* Gender**: A dropdown menu with the value '--None--'.
- Medical History**: A text area with a placeholder for medical history.
- Create Appointment Now?**: A checkbox.

## Tabs

- Added Doctor, Patient, Appointment tabs in the Lightning App for easy access.
- Grouped related objects and utilities under a single navigation bar.

The screenshot shows the 'Setup Tabs' page in Salesforce. At the top, there's a 'SETUP Tabs' header with a gear icon. Below this, the title 'Custom Tabs' is displayed, followed by a 'Help for this Page' link. A paragraph explains that custom tabs can extend Salesforce functionality or build new application functionality. It then details different tab types: Custom Object tabs (which look like standard tabs), Web tabs (for embedding external web applications), Visualforce tabs (for embedding Visualforce pages), Lightning Component tabs (for adding Lightning components), and Lightning Page tabs (for adding Lightning Pages). Below the text, there are two sections: 'Custom Object Tabs' and 'Web Tabs'. The 'Custom Object Tabs' section has a 'New' button and a 'What Is This?' link, followed by a table listing existing tabs. The 'Web Tabs' section also has a 'New' button and a 'What Is This?' link, but it currently shows 'No Web Tabs have been defined'.

| Action                                     | Label                        | Tab Style                                                                                 | Description |
|--------------------------------------------|------------------------------|-------------------------------------------------------------------------------------------|-------------|
| <a href="#">Edit</a>   <a href="#">Del</a> | <a href="#">Appointments</a> |  Car   |             |
| <a href="#">Edit</a>   <a href="#">Del</a> | <a href="#">Doctor</a>       |  Bell  |             |
| <a href="#">Edit</a>   <a href="#">Del</a> | <a href="#">Patients</a>     |  Apple |             |

## Home Page Layouts

- Created role-based Home Pages:
  - Doctor Home Page -> shows upcoming appointments, patient details.
  - Receptionist Home Page -> shows new registrations and appointment requests.

## Utility Bar:- Adder utility items like Recent Items, Flow, Notes and History in lighting app (MediSmart)

Optionally, enter values for these flow variables. Only variables that allow input access are supported.

varNewAppointmentId

Custom Appointment Management UI (Clinic Chatbot): As part of the User Interface Development phase, we implemented a custom Lightning Web Component integrated with Apex to handle appointment management. This UI acts as a simple chatbot interface allowing clinic staff or patients to create and update appointments directly from Salesforce. The component uses Apex methods for CRUD operations on Appointment records and provides a conversational, easy-to-use interface.

```
PS D:\MediSmart> sf force:lightning:component:create \
>> --type lwc \
>> --componentname patientChatbot \
>> --outputdir force-app/main/default/lwc
>>
Warning: The "--outputdir" flag has been deprecated. Use "--output-dir | -d" instead.
target dir = D:\MediSmart\force-app\main\default\lwc
